INSTALLATION OF GRID CONNECTED SOLAR ROOFTOPS

WASTE MANAGEMENT

The efficient waste management initiatives have been already taken with a dedicated interest from the year of establishment of the college in 1997. The waste that is being regularly generated as a result of daily consumption like paper, plastics, glass, metals, food waste etc is segregated at each level at the source itself. Segregated food waste, vegetable peels etc are collected from the college mess and is composted along with the garden waste and dry leaves. Recyclable wastes like pet bottles, cartons and stationery are collected which is periodically sold to vendors for recycling. Daily collection and disposal of waste is being practiced. In gardening, the treated waste water is utilization. A proper drainage system is arranged for all the buildings of the campus. The chemicals from laboratories are well neutralized before sending into drains. Rain water harvesting, repair of defective electronic devices are being done to extend utility. All electrical waste such as tube lights, bulbs, old switches, and wires are stored separately in a shed. Steel plates are used instead of paper. Awareness programmes about waste management are conducted on the campus for all the stake holdersto promote environmentally friendly practices such as part of “Swachh Bharat”.

Policy for Green Campus

The Green Campus Policy serves as a comprehensive framework for fostering sustainability and environmental responsibility within our campus community. By prioritizing energy efficiency, waste reduction, water conservation, and sustainable practices, we not only reduce our ecological footprint but also enhance the quality of life for all stakeholders. Through education, engagement, and continuous improvement, we can cultivate a culture of sustainability that empowers individuals to contribute to a greener future. Together, we can create a vibrant and resilient campus that embodies our commitment to environmental stewardship and inspires future generations to take action

The Green Campus Policy of the Institute emphasizes a proactive approach to sustainability, focusing on key areas such as energy conservation, waste management, and landscaping.

1. Energy Conservation

- Adoption of solar power to reduce reliance on conventional energy sources.
- Implementation of energy-efficient systems and practices across campus facilities.

2. Water Conservation

- Utilization of rainwater harvesting systems.
- Recycling of wastewater to minimize freshwater consumption.

3. Transportation

- Encouragement of bicycle use and battery-powered vehicles to reduce carbon footprint and promote eco-friendly transportation options.

4. Waste Management

- Effective collection and management of solid and liquid waste from various campus sources.
- Initiatives to promote recycling and reduce waste generation.

This policy not only aims to create a sustainable campus environment but also fosters a culture of environmental responsibility among students, faculty, and staff, ensuring that the Institute leads by example in the pursuit of sustainability.

Objectives of the Green Campus Initiative

- Promote Environmental Awareness
- Enhance Resource Efficiency
- Waste Reduction and Management
- Sustainable Transportation
- Green Spaces and Biodiversity

Implementation

To achieve the above objectives, the institute proposes the following initiatives

- To reuse waste water for gardening
- To restrict the entry of automobiles in to the campus.
- To encourage staff and students to use bicycles and battery powered vehicles in order to reduce carbon foot print.
- To install solar panels on the roof tops and wheeled to the grid.
- To sensitize staff and students on the importance of power saving.

- To construct recharge pits for harvesting rain water.
- To process food and vegetable waste through vermicomposting in order to produce organic fertilizers.
- To organize Energy, Environment and Green audits to review the effective usage of resources.
- To make aware of natural resource conservation and pollution free environment through extension activities.
- To restrict various stakeholders and vendors in the campus on usage of single-use plastics
